ARCHMAN GNU/LINUX

Archman, Arch linux based, originating in Turkey is a linux distribution.
It is not officially affiliated with Arch linux. It does not violate Arch Linux policies.
The Archman name is a name that has been given permission from the Arch team.

Archman GNU/Linux is an Arch Linux-based distribution which features the Calamares system
installer and a pre-configured desktop environment. Archman also features the
Pamac package manager for easy installation of new software packages.

**Archman is an easy to install, fast running, visual, lightweight and stable
Linux Distribution.

About to **Archman Example Files**:
The files in this directory have been placed for cultural presentation purposes. Since Archman Linux is
a Turkish-origin linux distribution, ancient Turkish tunes and visuals are included as sample files to test
applications.
